

# The Search For Oil

- Not as easy as it sounds.....
  1. Find good, water free oil
  2. Contract with the restaurant
  3. Try not to upset the local renderer

# Federal Clean Waterways Act

- Mandates the monitoring of public waterways for pollution
- Local counties given authority to regulate
- Many require permits to collect oil
- They dictate the terms of the permit

# Salt Lake County, Utah

- Permit Requirements
  - Pay \$125 per year permit fee
  - Carry General Liability Insurance Policy
    - \$1 Million in environmental coverage
  - Carry a \$5,000 Bond
  - Inspection of collection vehicle
  - Proof of proper disposal of waste products
    - Glycerin & Waste Water
  - Clearly display name & phone # on collection vehicle
  - Name & phone # on all collection barrels
  - Permit clearly displayed in vehicle window

# The Problem

1. Only businesses can get a General Liability Insurance Policy
2. Bonds are difficult to obtain
3. No mercy from the county

# So what to do?

1. Develop a “coop” oil collection & distribution group
2. Become permitted
3. Go underground & hope not caught
  - Renter is turning in any “foreign barrels” to the health department
  - Extremely unforgiving
  - No interest in cooperating
